Art Unit: 3693

DETAILED ACTION

1. The following communication is in response to Applicant's amendment filed 19 February 2008.

Status of Claims

2. Claims 1, 14, 15, 28, 29, 42-45 are currently amended. Claims 1-45 are currently pending.

Response to Arguments

3. Applicant's arguments filed 19 February 2008 have been fully considered but they are moot in view of the new grounds of rejection.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 1-3, 5-9, 14-17, 19-23, 28-31, 33-37 and 42-45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Maycock, Jr. et al. (hereinafter Maycock) U.S. Publication

2001/0047336 in view of Fowler et al. (hereinafter Fowler) U.S. Publication 2002/0026348 in further view of Behrenbrinker et al. (hereinafter Behrenbrinker) U.S. Patent 7,092,905.

Claims 1, 15 and 29, Maycock teaches a method for managing a financial account, comprising:

providing a consumer with the financial account having a first account component and a second account component, wherein the first and second account components have respective first and second account parameters associated with purchase transactions made by the consumer using the financial account (page 3, paragraph 0032-0034);

receiving an indication from the consumer of a selected vendor to be associated with the first account component (page 3, paragraph 0033);

processing purchase transactions with the selected vendor based on the first account parameter (page 3, paragraph 0033 and page 4, paragraphs 0041-0042);

processing purchase transactions with other vendors based on the second account parameter (page 3, paragraph 0033 and page 4, paragraphs 0041-0042).

Maycock fails to teach adjusting one or more feels charged to the financial account for purchase transactions with the selected vendor based on a number of purchase transactions with the selected vendor over a predetermined period of time. Fowler teaches combo-cards wherein a transaction and/or membership card may have one or more and preferable multiple AAPs and/or other marketing programs (page 11, paragraph 0083). Fowler further teaches a rate calculation for performing transactions at specific merchants including earning points on an escalating scale such as successive transactions at a merchant with a specified time period (page 10, paragraph

0075 and page 12, paragraph 0088). Therefore it would have been obvious to one of ordinary skill in the art at the time of the Applicant's invention to modify the teachings of Maycock to include adjusting one or more fees to the financial account for transactions with a selected vendor as taught by Fowler because it provides for loyalty between customer and merchant and therefore to increase customer satisfaction, retention and repeat business.

Maycock in view of Fowler fails to teach that the fees are finance fees. Behrenbrinker teaches a system for processing financial transactions in which customers receive reduced finance charges based on transaction data associated with a particular balance segment for a particular merchant (column 2, lines 22-33 and column 3, line 21-50). Behrenbrinker teaches that the rules are terms and conditions for each balance segment are predetermined (column 3, lines 51 thru column 4, line 8). Behrenbrinker also teaches that transaction data includes, but is not limited to transaction amount, transaction type, Merchant Category Code, merchant name, merchant number associated with the transaction. Therefore it would have been obvious to one of ordinary skill in the art at the time of the Applicant's invention to modify the teachings of Maycock in view of Fowler for adjusting fees based on number of transaction with vendors to specify that the fees are finance fees as taught by Behrenbrinker because it provides an incentive for establishing a merchant/customer relationship. Also, the number of transaction with a merchant is a type of transaction data which could apply to the transaction data taught by Behrenbrinker.

Claim 2, 16 and 30, Maycock fails to teach generating a billing statement reflecting an amount to be paid by the consumer based on the first and second account parameters, wherein

the amount to be paid is reduced when based on the first account parameter. Fowler teaches generating a statement (page 5, paragraph 0039) and reducing an amount to be paid based on the account parameter (page 10, paragraph 0075 and page 12, paragraph 0088).

Claims 3, 17 and 31, Maycock teaches wherein the financial account is a credit card account and the consumer may select any vendor that accepts purchases using the credit card account (page 1, paragraph 0013 and page 3, paragraph 0033).

Claims 5, 19 and 33, Maycock teaches wherein the purchase transactions are associated with one of: (i) an internet-based purchase transaction; (ii) a point-of-sale purchase transaction; (iii) a purchase transaction made over a telephone; and (iv) a purchase transaction made using conventional mail (page 2, paragraph 0018-0019 and Figure 2).

Claims 6, 20 and 34, wherein allowing the consumer to select a vendor further comprises: presenting an offer for the financial account to the consumer, wherein the offer includes a request to select a vendor to be associated with the financial account (page 3, paragraph 0033).

Claims 7, 21 and 35, wherein the request includes a list of vendors, and wherein the consumer may select the vendor from the list (page 3, paragraph 0033).

Art Unit: 3693

Claims 8, 22 and 36, wherein the request includes a list of vendors, and wherein the selected vendor is not included in the list (page 3, paragraph 0033).

Claims 9, 23 and 37, wherein the financial account includes an available balance that is adjusted based on the purchase transactions with the selected and other vendors (page 3, paragraph 0035).

Claims 14, 28 and 42, Maycock fails to teach adjusting one or more fees charged to the financial account for purchase transactions with the selected vendor based on a number of purchase transactions with the selected vendor over a predetermined period of time. Fowler teaches combo-cards wherein a transaction and/or membership card may have one or more and preferable multiple AAPs and/or other marketing programs (page 11, paragraph 0083). Fowler further teaches a rate calculation for performing transactions at specific merchants including earning points on an escalating scale such as successive transactions at a merchant with a specified time period and reducing fees/providing discounts (page 10, paragraph 0075 and page 12, paragraph 0088). Maycock in view of Fowler fails to teach that the fees are finance fees. Behrenbrinker teaches a system for processing financial transactions in which customers receive reduced finance charges based on transaction data associated with a particular balance segment for a particular merchant (column 2, lines 22-33 and column 3, line 21-50). Behrenbrinker teaches that the rules are terms and conditions for each balance segment are predetermined (column 3, lines 51 thru column 4, line 8). Behrenbrinker also teaches that transaction data includes, but is not limited to transaction amount, transaction type, Merchant Category Code,

Art Unit: 3693

merchant name, merchant number associated with the transaction. Therefore it would have been obvious to one of ordinary skill in the art at the time of the Applicant's invention to modify the teachings of Maycock in view of Fowler for adjusting fees based on number of transaction with vendors to specify that the fees are finance fees as taught by Behrenbrinker because it provides an incentive for establishing a merchant/customer relationship. Also, the number of transaction with a merchant is a type of transaction data which could apply to the transaction data taught by Behrenbrinker.

Claims 43-45, wherein adjusting one or more fees includes removing one or more fees charged to the financial account for purchase transactions with the selected vendor based on a number of purchase transactions with the selected vendor over a predetermined period of time (page 10, paragraph 0075 and page 12, paragraph 0088). Maycock in view of Fowler fails to teach that the fees are finance fees. Behrenbrinker teaches a system for processing financial transactions in which customers receive reduced finance charges based on transaction data associated with a particular balance segment for a particular merchant (column 2, lines 22-33 and column 3, line 21-50). Behrenbrinker teaches that the rules are terms and conditions for each balance segment are predetermined (column 3, lines 51 thru column 4, line 8). Behrenbrinker also teaches that transaction data includes, but is not limited to transaction amount, transaction type, Merchant Category Code, merchant name, merchant number associated with the transaction. Therefore it would have been obvious to one of ordinary skill in the art at the time of the Applicant's invention to modify the teachings of Maycock in view of Fowler for adjusting fees based on number of transaction with vendors to specify that the fees are finance fees as

taught by Behrenbrinker because it provides an incentive for establishing a merchant/customer relationship. Also, the number of transaction with a merchant is a type of transaction data which could apply to the transaction data taught by Behrenbrinker.

6. Claims 4, 10-13, 18, 24-27, 32 and 38-41 are rejected under 35 U.S.C. 103(a) as being unpatentable over the prior at as applied to claim 1 above, and further in view of Yun et al. (hereinafter Yun) U.S. Publication 2002/0069122.

Claims 4, 18 and 32, Maycock in view of Fowler teaches associated account parameters with selected merchants as discussed above. Maycock in view of Fowler fails to teach wherein the first account parameter is a first interest rate and the second account parameter is a second interest rate different from the first interest rate. Behrenbrinker teaches a system for processing financial transactions in which customers receive reduced finance charges based on transaction data associated with a particular balance segment for a particular merchant (column 2, lines 22-33 and column 3, line 21-50). Behrenbrinker teaches that the rules are terms and conditions for each balance segment are predetermined (column 3, lines 51 thru column 4, line 8). Behrenbrinker also teaches that transaction data includes, but is not limited to transaction amount, transaction type, Merchant Category Code, merchant name, merchant number associated with the transaction. Yun teaches a financial account management system wherein once account is used to a plurality of account components (credit card types) which have first and second account parameters (interest rates) (page 6, paragraph 0060, page 7, paragraph 0062 and Figure 3). Therefore it would have been obvious to one of ordinary skill in the art at the time of the

Application/Control Number: 09/987,952 Page 9

Art Unit: 3693

Applicant's invention to modify the teachings of Maycock in view of Fowler in further view of Behrenbrinker to include the teachings of Yun because it provides for increased customer satisfaction when processing purchases among available accounts and account parameters.

Claims 10, 24 and 38, Yun teaches applying first fees to the financial account for purchase transactions with a vendor based on the first account parameter (page 6, paragraph 0060, page 7, paragraph 0062 and Figure 3).

Claims 11, 25 and 39, Yun teaches wherein processing purchase transactions by applying second fees to the financial account for purchase transactions with the other vendors based on the second account parameter, wherein the second fees are higher than the first fees (page 6, paragraph 0060, page 7, paragraph 0062 and Figure 3).

Claims 12, 26 and 40, wherein the first and second account parameters are first and second interest rates, respectively, wherein the first interest rate is lower than the second interest rate (page 6, paragraph 0060, page 7, paragraph 0062 and Figure 3).

Claims 13, 27 and 41, wherein the first and second account parameters include first and second finance charges, respectively (page 6, paragraph 0060, page 7, paragraph 0062 and Figure 3).
